**\*\*Logbook\*\*** One of the oldest of the formats, the Logbook file format was developed in the late 1980s and was used for most major CAM software until the early 2000s. This format uses a lot of the information that you might find in a DAT file, such as date, start time, and end time. This information can be separated into three different parts: the log, the time log, and the comments log. The log is a collection of data from the start of the job to the end of the job. It consists of an automatic product line and a description of the geometry in the form of a text string. The time log and comments log include information such as the date and time that the job was started 82157476af
